

Behavior and Design of Steel and Composite Structures

Including Seismic Effects

Abolhassan Astaneh-Asl

TABLE OF CONTENTS

- Chapter 1** - Introduction to Steel and Composite Building and Other Structures /Page 1.1
- Chapter 2** - Properties of Material /Page 2.1
- Chapter 3** - Introduction to Loads per ASCE -07-2005/ Page 3.1
- Chapter 4** -Tension Members-Steel and Composite/ Page 4.1
- Chapter 5** – Compression Members- Steel and Composite /Page 5.1
- Chapter 6** - Flexural Members-Steel and Composite /Page 6.1
- Chapter 7** – Shear Design of Steel and Composite Members/ Page 7.1
- Chapter 8** –Steel Trusses and Truss Joists/ Page 8.1
- Chapter 9**- Bracing for Lateral Stability/ Page 9.1
- Chapter 10**-Torsion in Steel members/ Page 10.1
- Chapter 11**- Steel and Composite Members under Combined Loads /Page11.1
- Chapter 12** – Welds /Page 12.1
- Chapter 13** – Bolts and Rivets/ Page 13.1
- Chapter 14** –Shear Connections-Steel and Composite/Page 14.1
- Chapter 15**- Moment Connections-Steel and Composite/Page 15.1
- Chapter 16**- Semi-rigid Connections-Steel and Composite/Page 16.1
- Chapter 17**- Gusset Plate Connections /Page 17.1
- Chapter 18**- Base Plates and Splices in Steel and Composite Columns/Page 18.1
- Chapter 19**- Design for Concentrated Forces Applied to Steel and Composite Members/Page 19.1
- Chapter 20**- Design of Steel and Composite Building Systems: Centrically Braced Frames, Eccentrically Braced Frames, Moment Frames and Shear Walls/ Page 20.1
- Chapter 21**- Introduction to Steel and Composite Bridge Engineering and Steel and Composite Bridge Systems: Steel and Composite Girder bridges, Truss Bridges, Arch Bridges, Cable-Stayed Bridges, and Suspension Bridges/Page 21.1
